Blautherm

The Blautherm shower columns with XXL square shower head by Ramon Soler® are one of the brand's most eagerly awaited new products, based on design and functionality for your bathroom. With matt black, brushed gold and chrome finishes, these columns are the best choice for 2023 bathrooms.

Blautherm thermostatic shower column with XXL square shower head by Ramon Soler®, matt black finish.

Maximum innovation hand in hand with maximum quality

The Blautherm shower columns with square shower head by Ramon Soler® are one of the brand's most eagerly awaited new products, based on design and functionality for your bathroom. With chrome, matt black and brushed gold finishes, these columns are the perfect complement to any decorating style. At Ramon Soler®, innovation and quality are a priority, and for that reason the Blautherm columns are now presented fitted with a 300 mm ultra-slim square ABS shower head, which provides a unique showering experience. The shower head's minimal thickness gives it an

excellent design, while its generous size ensures the water is distributed evenly over the whole surface of the body, so you can enjoy a rejuvenating and refreshing shower.

Chrome Blautherm thermostatic shower column with XXL square shower head by Ramon Soler®.

With these shower columns, the brand offers a luxury product within everyone's reach. Its technology and performance, as a thermostatic tap, combine functionality, ergonomics, comfort and safety in use. It has a temperature limiter system that allows the user to choose the exact temperature they want at any given moment, without experiencing variations even if the tap is turned on and off or the flow rate is changed. This model also has the HOTBLOCK system which, should the cold water supply be interrupted, prevents high-temperature water from coming out. In other words, it is a piece that increases safety in the bathroom by avoiding possible scalding. It is also worth noting that these thermostatic shower columns come with a hand shower, perfect for those moments when you want to direct the water to specific areas of the body. This hand shower stands out for its versatility, offering three different water modes that can be selected with a single click: rain mode, a fine spray for an extraordinary and pleasant rainfall; champagne mode, bubbling drops of water that produce a relaxing effect; and finally, massage mode, an intense jet of water that stimulates and gives the body a revitalising sensation. It is also important to highlight that both the shower head and the hand shower have flexible silicone nozzles, thanks to which limescale and

impurities come away easily, even by rubbing with your fingers. Moreover, it is now available in the latest trending finishes, such as the highly elegant matt black and the sophisticated brushed gold, without forgetting the unrivalled and timeless chrome. Its finishes offer maximum resistance and durability; we highlight the matt black for its velvety feel and anti-fingerprint finish, and the brushed gold for its elegant, warm tone. The new Blautherm shower columns are made with high-quality materials and have an elegant, modern design. Combined with their competitive price, this results in an ideal product for an increasingly demanding market. Blautherm combines design and comfort, and is an ideal option that adapts to your space, whether you are looking for a modern, minimalist look or a more classic, sophisticated style.

CHROME	Ref. 945412RP300
MATT BLACK	Ref. 945412RP300NM
BRUSHED GOLD	Ref.945412RP300OC

TECHNOLOGY

TERMOSTOP. Thermostatic taps have a temperature limiter system, which shows the user the efficient-use temperature limit of 38° to 42°C. This system limits the hot water temperature by means of a stop on the rotation of the handwheel, which can be overridden simply by pressing a button.

HOTBLOCK. In the event of a sudden failure in the cold water supply, our thermostatic mixer has a system that automatically blocks the high-temperature outlet, which could otherwise scald the user.

SENSITIVITY of the thermostatic tap has been carefully studied so that it lets us comfortably adjust the desired temperature: a light press of the button plus a turn of the temperature control handwheel is enough to raise it, whenever desired, above the preset temperature (38°C). In addition, the 1700T thermostatic cartridges by Ramon Soler react in less than 1 second to variations in temperature and flow rate, maintaining the requested temperature.

ANTI-LIMESCALE. Our shower heads have flexible silicone nozzles, thanks to which limescale and

impurities come away easily, even by rubbing with your fingers. Ramon Soler® uses top-quality, wear-resistant nozzles, so the shower head lasts longer and works 100% reliably. In the long run, good maintenance prevents technical problems.

ERGONOMICS

The ergonomic design of our taps makes them easy for anyone to use.
