Civic

Ramon Soler® launches the Civic collection, a new line of 'all-terrain' bathroom and kitchen taps, thoroughly attractive tapware aimed at an increasingly demanding market that needs competitive, well-designed products.

Civic by Ramon Soler®

This new series is inspired by geometric forms, with clean, elegant lines that blend seamlessly into any modern, contemporary space. Each piece has been carefully designed to offer a balance between aesthetics and functionality, guaranteeing a comfortable and ergonomic user experience. An ideal option for those seeking quality and style in their spaces.

Civic single-lever shower mixer by Ramon Soler®

In addition to its innovative design, the products in the Ramon Soler® Civic collection are made from high-quality materials. It has a chrome finish, which guarantees its durability and strength. It also features advanced technologies such as the following: TERMOSTOP BLOCK. A system patented by Ramon Soler® that avoids the risk of burns, as well as limiting the maximum hot water temperature.

S2 WATER-SAVING SYSTEM. Ramon Soler® single-lever taps have a dual flow position system. When the lever is operated to open the tap, the user notices resistance at one point of the travel, where 50% of the flow is supplied. If desired, the user can continue moving the lever until maximum flow is reached.

Sustainability is a core value for Ramon Soler, and the Civic collection is no exception. The products in this new line are designed to reduce water and energy consumption, thanks to the S2 water-saving system, which opens the handle in two stages. They also feature technologies such as the latest-generation ceramic cartridge, which ensures a smooth, drip-free flow of water.

Civic by Ramon Soler®

S3 WATER-SAVING SYSTEM FOR BASIN TAPS. The complete Civic collection also allows us to choose a basin tap with the S3 cold-start central opening system, which also includes an intermediate stop (S2 System) in the vertical travel of the handle, helping to save up to 50% of water. This way we can choose our basin tap with the S2 water-saving system or with the S3 cold-start opening system.

The new cold-start tap technology encourages the responsible use of water and energy, making it a major step forward in the fight for energy saving.

When we need hot water, it is enough to move the handle 90 degrees to the left from the central position, and both the temperature and the flow of water will respond quickly. With this gesture, we oblige ourselves to turn the handle if we want hot water, and for everyday uses that do not need hot water, we simply lift the tap handle in the centre as we are used to.

The cold-start opening combined with the intermediate stop makes the Ramon Soler® system a unique cold-start opening system that saves both water and energy in a single tap.

The Ramon Soler® Civic collection is the perfect choice for those looking to combine design, quality

and sustainability in their bathroom and kitchen spaces.
