The New Fly collection

Designer taps

Ramon Soler®, a tap manufacturer since 1890, turns 130 this year, 2020, and to mark the celebration it is launching its new New Fly collection. A complete range for the washbasin and kitchen, characterised by a design that is as imposing as it is elegant. New Fly is synonymous with design. A carefully designed collection with a distinctive feature: the sharp angles of inclination of its body and spout, and the organic lines of its handle, which give it a sleek, dynamic look.

New Fly by Ramon Soler®

New Fly by Ramon Soler®: the organic lines of its handle give it a dynamic look

It is a most user-friendly collection thanks to its handle, which has a recess at the top end so that it can be moved comfortably, encouraging the natural position of the hand when operating the single-lever mixer.

Setting with New Fly by Ramon Soler®

DESIGN

New Fly is distinguished by incorporating essential elements of Ramon Soler®'s DNA, such as technology that promotes sustainable and responsible water consumption. It also includes a new system, the Sacrificial Anode, which acts against corrosion so that the chrome finish of the tap keeps its spotless shine. The brand reinforces the perfect preservation of the chrome with its exclusive diamond finish system, which provides resistance and shine thanks to a carefully studied process and rigorous quality controls. It is also a collection that exudes quality and safety. The taps in the New Fly collection blend into the architecture of the bathroom, becoming its true stars through their personality and aesthetic impact.

New Fly is available as taps for the kitchen, washbasin, shower, bath and bidet. The collection can fully and perfectly equip any room, adapting to its needs. In short, the new New Fly collection has a minimalist, dynamic design that at the same time puts the consumer's well-being first by improving ease of use. And besides its great design, New Fly has been created with even those who keep a close eye on price in mind.

MANUFACTURER	Industrias Ramon Soler, S.L.
COLLECTION	New Fly

SYSTEMS

- S2 WATER SAVING: Our single-lever mixers incorporate an intermediate stop in the vertical travel of the lever, delivering a flow that saves 50% of the water.
- S3 ENERGY SAVING: New Fly is optionally available with the S3 cold-start opening system, with the resulting savings in water and energy.
- SACRIFICIAL ANODE: The Sacrificial Anode protects the chrome by means of a zinc-magnesium part. This system, patented by Ramon Soler, triples resistance to corrosion.
- SENSITIVITY: Our single-lever cartridges allow the desired temperature to be adjusted comfortably, blending the water progressively without sudden temperature changes.
- ERGONOMICS: The ergonomic design of our taps makes them easy for anyone to use.

- DURABILITY: Our taps stand out for their great resistance, as all their external components subject to wear are metal, which ensures great durability over time.
- DIAMOND FINISH: The surface of all our taps is highly resistant and has an extra-gloss finish thanks to a carefully studied chrome-plating process and rigorous quality controls.
- ACOUSTIC PROTECTION: Our taps have various acoustic filters, both at the water inlets of the taps and inside their regulating mechanisms, optimising acoustic protection.
- MECHANICAL DIVERTER: The upper control has a double function: it shuts off the water and diverts it to 2 outlets. It is a mechanism with ceramic discs that provide high precision and extreme resistance. *System only applicable to the 2-way concealed valve (571502).
