Termotech shower taps

'The democracy of design in a thermostatic tap'

Termotech is the collection of thermostatic taps by Ramon Soler® that best combines savings, excellence and technology.

Termotech thermostatic shower tap by Ramon Soler®

With this collection, Ramon Soler® offers great design within reach of all audiences. We could speak of a market strategy, of the democratisation of design, offering a high-quality product of great design that is also highly functional, at a very competitive price.

But Termotech does not stand out only for its design and competitive price; its most important point is the design of its handwheel. The handwheel is made of ABS with a knurled surface. This type of knurling had not been achieved before; Ramon Soler® has been a pioneer in cutting ABS with this technique, creating a knurling based on micro-pyramids with a high grip and a superior aesthetic,

with technology of great beauty and ergonomics.

Ramon Soler® has achieved an elegant and highly avant-garde cut, technically very advanced; in fact, even the major international tap brands are imitating the knurling technique created by Ramon Soler®

Termotech also features all the characteristics and technological advances of thermostatic taps, with many advantages over any other tap. Their use has become widespread, mainly in showers and bath-showers.

Among their advantages, it is worth highlighting the convenience of always having water at the same temperature, even if the tap is turned on and off or the flow rate is changed. They have two controls with clearly differentiated functions: one for flow rate and one for temperature.

Savings: the desired temperature is reached more quickly than with any other type of tap.

Its Termostop system gives these taps a temperature limiter that shows the user the efficient-use temperature limit of 38° to 42°C. This system limits the hot water temperature by means of a stop on the rotation of the handwheel, which can be overridden simply by pressing a button. With its Hotblock system, safety is also improved: in the event of a sudden failure in the cold water supply, the thermostatic mixer has a system that automatically blocks the high-temperature outlet, to avoid scalding the user. It offers high sensitivity and accuracy. The thermostatic tap has been designed to allow precise selection of the desired temperature: a light press of the button while turning the temperature control handwheel is enough to raise it whenever desired. In addition, the thermostatic cartridges by Ramon Soler react in less than 1 second to variations in temperature and flow rate, maintaining the selected temperature.

Calibration: all taps are carefully calibrated at the factory to 38 °C

Finally, its ergonomics and comfort are worth highlighting. The ergonomic design of the taps makes them easy and comfortable for anyone to use, allowing the water temperature to be adjusted quickly and maintained throughout the shower. Even if another tap is turned on, with the resulting drop in pressure, the temperature remains constant.
