Kitchen tap with swivel high spout

The most minimalist kitchen tap in the latest trending finishes

Nowadays, the kitchen has become the most important shared space in a home, the setting for the most enjoyable gatherings with family and friends, and it has also evolved to offer the latest trends. In its design, the tap is a primary and indispensable element, capable of giving the space its own character and of making life easier for its users. If we add the latest trending finishes to this, it becomes the most aesthetic and functional key element of the kitchen.

388401NM kitchen tap with tall swivel spout in matt black finish by Ramon Soler®

Ramon Soler® presents the 388401 single-lever kitchen tap, with a slender design and minimalist lines. Aesthetics, functionality and quality are the main factors in kitchen design. In response, the brand offers a sink tap with a tall swivel spout, with all the advantages of a high-quality designer tap.

Its spout, 27.5 cm high, and its swivel system make kitchen tasks easier.

These kitchen taps are available in the highly resistant Diamond Finish chrome finish and in new finishes, inspired by global design trends, that give kitchens the essence of sophistication: a brushed nickel finish, which brings timeless beauty and a handcrafted look; satin copper, a finish that will not go unnoticed; and matt black, the colour of immaculate elegance.

It is worth noting that all the finishes of this tap are antibacterial and scratch-resistant, features that make it the ideal tap for handling food and also a very hard-wearing one. Quality is an essential requirement for Ramon Soler®.

It is also available with two different handles: a cylindrical minimalist-style handle for the copper and chrome finishes; and a very ergonomic flat handle, available for the chrome, matt black and brushed nickel finishes.

SYSTEMS

HEALTH REQUIREMENTS. Our taps meet the demanding health regulations (ACS France and KTW Germany), which guarantee that the materials in contact with water pose no risk to health.

SENSITIVITY. Our single-lever and thermostatic cartridges allow the desired temperature to be adjusted comfortably, regulating the water mix progressively, without sudden temperature changes. In addition, our thermostatic cartridges react in less than a second to variations in temperature and flow, maintaining the requested temperature.

ERGONOMICS. The ergonomic design of our taps makes them easy for anyone to use.

SACRIFICIAL ANODE. The sacrificial anode protects the finish through a zinc-magnesium part. This system, patented by Ramon Soler, triples corrosion resistance.
