BLAUTHERM built-in single-lever KIT

In these times, when Covid-19 is shaking humanity, sustainability, water saving and energy efficiency have become essential qualities. During lockdown, water use increases, as we follow strict hygiene rules. For this reason, it is the time to be responsible in how we use it and to become aware of how important it is to look after the environment. To this end, fitting the bathroom with an efficient tap is the most important factor.

BLAUTHERM Kit by Ramon Soler®; round shower head on the left, square shower head on the right.

Ramon Soler® shows once again its constant concern for improving and for offering competitive, high-quality products to its customers. It launches the Blautherm kit onto the market, available in round or square format. A novel shower set that includes: a 2-way concealed single-lever mixer with a super-slim plate, plus a large ABS wall-mounted shower head and a handheld shower with holder and hose. The Blautherm Kit offers the best high-quality set on the market, notable for its water- and energy-saving performance and a very competitive price.

BLAUTHERM KIT by Ramon Soler

These concealed sets are the ideal companion for easy, fast installation. The KIT is designed with the installer in mind, as all the elements needed for installation are found in a single box, thus helping to make a purchase that is quick, efficient, convenient, high-quality and very economical. The tap offered by the Blautherm Kit is the concealed single-lever mixer with Superslim plate, which is undoubtedly the most outstanding element of the set, as it combines ergonomics, minimalist design, acoustic protection and durability. It is a high-quality single-lever mixer that has a MANUAL DIVERTER and a ceramic cartridge, so we are not at the mercy of pressure changes in the installation, and we give the user 100% reliable comfort. On the technical side, it includes the S2 water-saving system, which incorporates an intermediate stop in the vertical travel of the lever, providing a flow with a 50% saving. Another great advantage is that it requires zero maintenance for large installations and stands out for its great strength, since all its external components are metal, giving it excellent durability over time. Two types of the new Blautherm KIT sets are offered:

- With reference 941502RM250, a 2-way concealed single-lever mixer is offered, together with a large circular (Ø 250 mm) STAINLESS STEEL wall-mounted shower head and a handheld shower with holder and hose.
- With reference 941502RK250, a 2-way concealed single-lever mixer is offered, together with a

250x250MM square STAINLESS STEEL wall-mounted shower head and a handheld shower with holder and hose.

SYSTEMS

S2 water saving

50% of the flow is supplied. This limit can be exceeded by opening the tap to its maximum flow if desired.

Ergonomics

The ergonomic design of its taps makes them easy for anyone to use.

Shower system

A system for shower heads and handheld showers that allows perfect water distribution through each nozzle. This system guarantees a considerable saving in water consumption (30%), while providing a more comfortable shower. SHOWER SYSTEM offers maximum precision and constant water distribution through each of the nozzles, guaranteeing uniform spray.

Anti-limescale

Our shower heads have flexible silicone nozzles, thanks to which limescale and impurities come off easily, even by rubbing with the fingers. Ramon Soler® uses top-quality, wear-resistant nozzles, so that the shower head lasts better and its operation is 100% reliable. In the long run, good maintenance prevents technical issues.

TECHNICAL FEATURES

MANUFACTURER	Industrias Ramon Soler
--------------	------------------------

MODEL	Blautherm Ref. 941502RM250 and 941502RK250
-------	--

DESIGN	In-house team
--------	---------------

Ø35 mm ceramic cartridge

Diverter cartridge

S2 water-saving system, with the handle opening in two stages.

Flow rate at 3 bar: shower outlet 21 l/min and bath outlet 22 l/min

Noise level at 3 bar: < 20 dB.

Brass chrome: 15 microns of nickel thickness, 0.3 microns of chrome.

Withstands static pressures of 10 bar and water hammer of 25 bar.

Recommended hot water temperature 55°C. Maximum operating temperature 65°C. Maximum 1h at 90°C.

Operating pressure between 1-5 bar. 3 bar recommended.
