ramonsoler's most hygienic taps

Technology and accessibility within everyone's reach.

In today's world, health safety as well as water and energy saving is one of our greatest commitments. For these new needs, the SOLTRONIC taps by Ramon Soler® will become our greatest ally.

SOLTRONIC 8119B electronic tap by Ramon Soler®.

Innovation makes our lives easier, and with SOLTRONIC 8119B Ramon Soler® offers the perfect electronic tap for bathroom projects that seek innovation, quality and design.

With this design, Ramon Soler® puts within our reach a washbasin mixer tap with a 9V alkaline battery, always with an infrared sensor, ideal for projects in public spaces.

SOLTRONIC 8119B by Ramon Soler® has an architectural-style design with minimalist lines, perfect for blending into contemporary bathrooms in both communal and domestic settings. The brand gives this piece great design and quality, the two keys to becoming a successful tap.

It stands out for paying particular attention to comfort, thanks to barrier-free activation and the temperature regulator, which offers the possibility of setting a maximum of up to 50°C. This allows safe, effortless use by young children, the elderly and people with disabilities. They are also designed so that their sanitary function is extremely effective and robust, and vandal-proof. The SOLTRONIC 8119B tap provides us with maximum hygiene and comfort. Thanks to the way it works, we do not need to touch it, which favours careful cleanliness and benefits us with a precise water outlet: when we place our hands under an electronic tap, it releases just the water needed.

Unlike the manual taps we usually have in our bathrooms, which are often left running or partly open, electronic taps close automatically after use. This guarantees a significant saving of water, of up to 70% compared with other conventional systems. In addition, SOLTRONIC 8119B by Ramon Soler® has an electronically set flow time when activated and includes an adjustable safety time limit, by remote control. By default, if the sensor is covered for more than 90 seconds, the water outlet closes automatically, which prevents any risk of uncontrolled consumption. For 130 years Ramon Soler® has been outdoing itself day after day, perfecting its products for the specific demands of the market, in terms of water saving as well as safety, health and full comfort for people.

SOLTRONIC 8119B electronic tap by Ramon Soler®.

SOLTRONIC REF. 8119B

Single-water angled electronic washbasin tap with battery
