New Fly in Matt Black

Immediate availability within 10 days and, as if that were not enough, at the most competitive price

The New Fly collection by Ramon Soler® had already won us over with its exquisite design, but this time it conquers us again with its matt black finish.

Single-lever basin mixer from the New Fly collection by Ramon Soler® in matt black finish.

MATT BLACK, an unrivalled finish

Trends in architecture and interior design are once again focusing on black, which never goes out of fashion and is now a must-have in the most contemporary bathrooms. Now, in a matt finish, it is the latest trend in the most avant-garde bathrooms. It is worth noting that the matt black finish from Ramon Soler® is produced using advanced technology techniques that provide extra resistance

and durability, proof against rust, wear, scratches, limescale and sea water. The matt black finish is achieved with a sophisticated electrostatic bath over galvanised metal, which gives it a durability in the salt spray test ten times superior to chrome.

Concealed single-lever shower set and single-lever basin mixer from the New Fly collection by Ramon Soler® in matt black finish.

DESIGN

The New Fly collection is distinguished by incorporating essential elements of Ramon Soler®'s DNA, such as technology that promotes sustainable and responsible water consumption. It also includes a new system, the Sacrificial Anode, which acts against corrosion so that the chrome finish of the tap keeps its spotless shine, and also ensures that the matt black finishes have maximum resistance and durability. New Fly is synonymous with design. A carefully designed collection with a distinctive feature: the sharp angles of inclination of its body and spout, and the organic lines of its handle, which give it a dynamic look. Its handle has a recess at the top end so that it can be moved comfortably, encouraging the natural position of the hand when operating the single-lever mixer. In addition, the inclined tap gives it a design that is both sleek and dynamic.

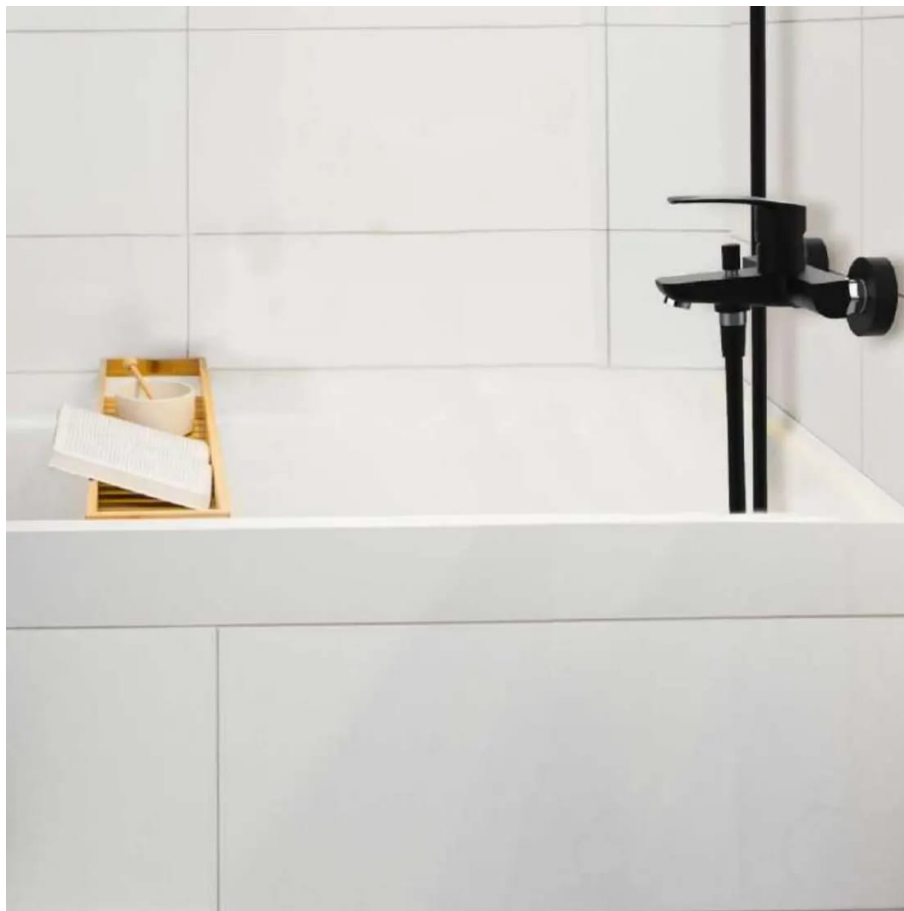

UNBEATABLE VALUE FOR MONEY

Besides its great design and quality, New Fly has been created with even those who keep a close eye on price in mind, offering a very tight price that makes it an undisputed leader.

An absolutely attractive product for a market that is more demanding every day and needs more affordable, stylish products backed by leading brands such as Ramon Soler®.

IMMEDIATE DELIVERY

Another very important feature to highlight is its efficient delivery. The brand works constantly to offer the best pre-sales and after-sales service. It therefore optimises its lead times as far as possible, and can offer immediate availability of New Fly. In just 10 working days you can enjoy New Fly in your bathroom. New Fly is available as taps for the kitchen, washbasin, shower, bath and bidet. The collection can fully and perfectly equip any room, adapting to its needs.

SYSTEMS

S2 WATER SAVING

Our single-lever mixers incorporate an intermediate stop in the vertical travel of the lever, delivering a flow that saves 50% of the water.

S3 ENERGY SAVING

New Fly is optionally available with the S3 cold-start opening system, with the resulting savings in water and energy.

SACRIFICIAL ANODE

The Sacrificial Anode protects the chrome by means of a zinc-magnesium part. This system, patented by Ramon Soler, triples resistance to corrosion.

SENSITIVITY

Our single-lever cartridges allow the desired temperature to be adjusted comfortably, blending the water progressively without sudden temperature changes.

ERGONOMICS

The ergonomic design of our taps makes them easy for anyone to use.

DURABILITY

Our taps stand out for their great resistance, as all their external components subject to wear are metal, which ensures great durability over time.

DIAMOND FINISH

The surface of all our taps is highly resistant and has an extra-gloss finish thanks to a carefully studied chrome-plating process and rigorous quality controls.

ACOUSTIC PROTECTION

Our taps have various acoustic filters, both at the water inlets of the taps and inside their regulating mechanisms, optimising acoustic protection.

MECHANICAL DIVERTER

The upper control has a double function: it shuts off the water and diverts it to 2 outlets. It is a mechanism with ceramic discs that provide high precision and extreme resistance.
