ramonsoler's Pure Water wins the German Design Award 2026

The kitchen tap with integrated filtration and magnetic return wins over the jury with its combination of design, ergonomics and sustainability.

The Pure Water kitchen tap by ramonsoler has been recognised with the German Design Award 2026, in the Excellent Product Design category. The jury praised its minimalist aesthetic, its advanced user experience and its contribution to responsible water consumption.

Pure Water kitchen tap by ramonsoler in chrome, with magnet system, natural rubber swivel spout and filtered water outlet. Winner of the German Design Award 2026.

International Design Award

The German Design Awards are the leading international award of the German Design Council and, since 2012, have recognised the impact of design on a global level. The programme distinguishes, among others, the categories Excellent Product Design, Excellent Communications Design and Excellent Architecture, with different levels of recognition assessed by an international jury of experts.

Recognition for design and technology

Pure Water by ramonsoler receives the award for a set of innovations that combine aesthetics and functionality: it incorporates a pull-out hand spray with magnetic return — a neodymium magnet guides it gently into position — and a filtration system integrated into the spout that removes contaminants and solids, offering water of great quality for drinking and significantly reducing the use of plastic from bottled water. Its ergonomics are reinforced by a tall spout made of natural rubber with 360° rotation, which provides the flexibility needed to handle large utensils and prepare

food comfortably, while the side single lever allows intuitive control of flow and temperature in an ensemble of clean lines and balanced proportions.

Trend-setting finishes of maximum resistance

Pure Water is offered, on the one hand, in timeless chrome with ramonsoler's exclusive Diamond Finish, which provides maximum shine and outstanding resistance to wear and corrosion; and, on the other, in ramonsoler's Quality Finish range — matt black applied by electrostatic coating over galvanised metal, and brushed nickel and copper produced with PVD technology — a selection of exclusive finishes that provide high-hardness surfaces and stable colour, with results up to 10 times more resistant than chrome according to a certified salt spray test. Its solid, contemporary aesthetic harmonises with marble or granite worktops and with the latest trends in wall and floor coverings.

Pure Water kitchen tap by ramonsoler, with magnet system and built-in water filtration, in brushed nickel finish.

Sustainability you can feel

Thanks to its integrated filtration system, Pure Water by ramonsoler delivers high-purity water straight from the tap, significantly reducing the use of single-use plastics and, with it, the

environmental footprint. Its durability-oriented design simplifies maintenance and extends its service life. With purified water at home, bottles and large water containers are eliminated: a family of four can consume up to 700 bottles a year, a volume that this tap helps to avoid.
