ramonsoler becomes a #BREEAMER

Ramon Soler® obtains the BREEAM® certificate as a socially and environmentally responsible company. BREEAM® endorses its products and its differentiation in the global market in contributing sustainable environmental value to buildings.

New Fly basin tap with cold-start opening system by Ramon Soler®, a single-lever tap well suited to sustainable projects that value water and energy saving.

The Building Research Establishment Environmental Assessment Method (BREEAM) is an environmental certification for buildings that follows the UK system. This system is increasingly in demand because of the high and ever-growing worldwide demand for sustainable buildings. BREEAM assesses buildings across ranges from energy to ecology. It includes the categories of internal environment, materials, transport, waste, ecology, management processes and the use of energy and water.

Ramon Soler® takes responsibility towards the planet by following ecological criteria and

manufacturing eco-efficient taps and hydrotherapy systems that make it possible to optimise resources, taking into account the energy embodied in each product and the materials that require less energy during the production stages.

For Ramon Soler®, the BREEAM® certificate is an opportunity to give visibility and transparency to the ecology and sustainability of buildings, features increasingly in demand worldwide.

Environmental concern and offering sustainable taps is one of the aims of its philosophy, in order to achieve manufacturing and distribution that respects the environment. Ramon Soler® taps make BREEAM® certification possible in sustainable buildings, thanks to the water- and energy-saving systems and flow limiters built into the taps. They also have exclusive patents focused on protecting its taps against corrosion. Moreover, its R&D&I team provides the technical advice needed to meet the requirements of BREEAM® certification

Since 1890, Ramon Soler® has created tap models designed for people, seeking not only to create beauty but also comfort and precision in their mechanisms. Its mission is to prioritise research to optimise not only water and energy consumption but also the optimisation of materials and production processes.

Ramon Soler has become an internationally renowned brand with a 16,000 m2 headquarters in Sant Joan Despí (Barcelona). Its products are certified to the most demanding standards and its sales networks extend across 5 continents, in more than 50 countries.

In short, being sustainable is in its nature, and to that end it incorporates and makes the most of technological innovation with eco-efficient intelligence, without loss of comfort for the user, offering a wide range of taps and hydrotherapy systems that stand out as eco-efficient, aesthetic, comfortable and highly reliable products.
