Sustainability and style from ramonsoler

Saving water and good design are not at odds

Sustainability, water saving and energy efficiency have become essential qualities for the home and public spaces. Now more than ever, humanity is becoming aware of how important it is to care for the environment, which is why every detail must be looked after, and there is no better place to start than by saving where we use the most, in order to preserve the planet.

Bathroom with matt black taps by Ramon Soler®

But that does not mean we must give up good design, current trends or the highest quality. Ramon Soler® works constantly to offer products with all the performance demanded without neglecting the most current trends, such as the unrivalled matt black finish, which fills the bathroom with character and personality, at a time when we need to give our rooms a fresh look and fill them with energy so that we feel strengthened. Ramon Soler® offers single-lever basin mixers, freestanding columns,

shower columns, concealed basin mixers and concealed shower mixers, which incorporate exclusive water- and energy-saving systems and also feature an exquisite, elegant, on-trend design with their durable, resistant matt black finish. The matt black finish never goes out of fashion and is completely on trend, conquering the most exclusive and avant-garde bathrooms. Black is the colour that has always been associated with elegance, sobriety, unostentatious luxury and the utmost sophistication. Moreover, black taps let us play with contrasts and suit any style.

Blautherm thermostatic shower column in matt black finish by Ramon Soler®

The brand, which cares for the outside and, if possible, even more for the inside, incorporates the most advanced technology, thanks to which we can equip an entire bathroom offering safety, savings and design, everything you could ask for combined in a single product.

Its taps incorporate demanding systems that make each product an unbeatable piece. Systems such as:

S2 WATER SAVING

Single-lever mixers with an intermediate stop in the vertical travel of the lever, delivering a flow that saves 50% of the water.

S3 ENERGY SAVING

Cold-start opening, with the resulting savings in water and energy.

SENSITIVITY

The single-lever cartridges allow the desired temperature to be adjusted comfortably, blending the water progressively without sudden temperature changes.

ERGONOMICS

The ergonomic design of its taps makes them easy for anyone to use.

ACOUSTIC PROTECTION

Its taps have various acoustic filters, both at the water inlets of the taps and inside their regulating mechanisms, optimising acoustic protection.

Ramon Soler® meets the market's most demanding requirements, always taking a step forward with its R&D&I team. Its systems are not only environmentally friendly but also improve people's lives and stay up to date with design and trends.
