Ramon Soler® joins the BIM revolution

Ramon Soler® one of the most recognized brands in the faucet sector, with a history of more than 130 years and with a constant and insatiable spirit of improvement and adaptability, is already part of the new era of digital construction , modeling a large part of its products in BIM format.

Since 2006 **Ramon Soler®** has a specific Contract department, where attention to professionals, architects, designers or interior designers is the objective, and therefore BIM (Building Information Modeling) is an indispensable tool to be able to offer their products to these professionals , and that they can make use of them in the creation and management of construction projects, being able to centralize all the project information in a digital information model.

The use of **BIM** goes beyond the design phases, encompassing the execution of the project and extending throughout the life cycle of the building, allowing its management and reducing operating costs. **BIM** objects help to visualize and present the idea of the construction, as well as to create intelligent 3D models for the elaboration of the documentation of the work. They contain all relevant product properties for planning, details such as: material, dimensions and performance.

Currently at **Ramon Soler®** they have a large number of **BIM** references, with the most important representation of their products, where their different models allow the professionals to count on the brand for all types of projects, from the most exclusive, where they can contribute hydrotherapy products with a differentiated and avant-garde design. They can also contribute taps that are at the latest trend due

to their range of excellent quality finishes, from matte black, brushed gold or brushed nickel, to products more focused on more commercial promotions, always with unbeatable quality standards.

In short, the objective of this new conception in its work methodology is, undoubtedly, to make it easier for professionals in the construction sector to work with Ramon Soler® products, thus providing them with added value. Previously, they had worked with CAD tools that had been generally implemented in all architecture, construction and engineering firms in the construction sector, among other professionals. But although it is still useful, the technological level offered by these applications is limited, especially considering the growing importance of the management of infrastructures.

For this reason, the firm is present on platforms such as **BIMobject**, the platform most used by the best architects, designers and interior designers, and it is also an international platform, which is a priority for the firm, since they work worldwide. For **Ramon Soler®**, it is essential to bet on the platform and be updated as digitization progresses, which is no longer the future but the present.

Click [here](#) to access **Ramon Soler®'s BIMobject** profile.

For **Ramon Soler®**, the **BIMobject** tool is ideal to be able to contribute its digitization to the sector. Digitization in the construction sector is being a great advance to be able to allow a technical relationship between manufacturer and professional. It is increasingly essential for different projects, such as public projects where, without BIM, it is not possible to position itself, since as we have previously commented, BIM allows managing all the project cycles, and its useful life.

About Ramon Soler®

Faucet manufacturer based in Barcelona since 1890, with a 16,000 m2 industrial warehouse in San Joan Despí (Barcelona).

Its catalogue offers a wide range of taps and hydrotherapy systems that stand out for being eco-efficient, aesthetic, comfortable and highly reliable products. Ramon Soler® has created faucet models designed for people, seeking not only to create beauty but also comfort and precision in their mechanisms. For a few decades, they have prioritized research to optimize not only water and energy consumption but also the optimization of materials and production processes.

Ramon Soler® has become an international benchmark brand because its products have been certified with the most demanding regulations and its commercial networks extend to 5 continents, in more than 50 countries.
